Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Radio-Activity an Elementary Treatise, From the Standpoint of the Disintegration Theory, Vol. 1 In this book I have attempted to give a connected account of the remarkable series of investigations which have followed M. Becquerel s discovery, in 1896, of a new property of the element uranium. The discovery of this new property of self-radiance, or radio-activity, has proved to be the beginning of a new science, in the development of which physics and chemistry have worked in harmony. The pioneer in the chemical development of the subject was Mme. Curie, who, by the discovery of radium, extended our knowledge of the new property out of the region of the infinite small effects in which it had its beginning, and demonstrated it on a scale that could neither be explained nor explained away. On the physical side, the brilliant and elaborate researches of prof. Rutherford, at first mainly with thorium - an element which, like uranium, is so feebly active that it had been studied for a century before its radio-activity was discovered - paved the way for a complete and general theory of the cause and nature of the new property. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that...
